

Cyber Security. . .

we protect your business.

Security threats go far beyond viruses, firewalls and email attachments. We provide NSA and DOD recommended levels of cyber security monitoring included at no additional cost.

Through our Cyber Protection Package, Xtreme's Cyber Security Software will monitor your Internet connection to protect you from D-DOS, Ransomware and the latest threats to your business.

Premier Tech Support. . .

when you need it.

We monitor our network around the clock to significantly reduce outages. This means that we can identify potential issues before they affect you.

In addition, our built-in cyber security system monitors your connection for cyber attacks from outside sources.

Should you encounter a problem with your connection, our tech support staff will advance your ticket to priority status to keep your down time to a minimum.

Emergency Backup. . .

included with service.

Your business is a priority to us. Included with your Xtreme Internet Business Service Plan is a fail-over system. In the event that your Internet connection is lost, the emergency back-up system will keep you connected to keep your business running smoothly.

With Xtreme Internet, you can feel confident that your business has the back-up it needs when you need it most.

'Your peace of mind is our state of mind.'
